Dan,

I am intrigued! This sounds very exciting. I am working with the Asbury Park (New Jersey) Board of Education and their Information Technology Centers. We have just introduced the Cisco Academy to the High School and we are looking for ways to increase funding in support of the program. Cisco supplies discounted training for our teachers and IT staff as well as a substantial discounts on the equipment, routers, hubs, etc. that are needed to support the program. Asbury Park is a divided community with most of the minority population located in a few blocks surrounding the former boardwalk area and on the West side of town. We are plagued with an extremely high drop out rate for high schoolers and a high out of wedlock birth rate. We are in a very wealthy county of New Jersey and I think we could use the GIS software to pinpoint resources within the community the way you are doing. I actually work for a for-profit high tech firm who has a commitment to community. Our company allows me to volunteer to work with the schools in a partnership that will assist in placing youngsters into internships. We also write grants for projects that we propose for the IT Department, adding value to our RFP responses. Since we are a minority owned company, the school board and the IT staff at the school see the benefits of this public private relationship. The partnership would be interested in this technology as it could help in finding the funding we need. I would love to work with you on what you are doing. Perhaps we could connect our efforts via the web?

Regards-

Kathy Kenoly

Kathy,

The map is produced using a software technology known as a Geographic Information System. There are a handful of vendors who produce this, with companies such as Environmental Research Systems, Inc (ESRI), Intergraph, MapInfo, etc. In each case the software allows you to plot data in map format, with each different kind of data working like an overlay on the map which you can add or delete.

We've been building a database of tutor/mentor programs in Chicago formally since 1993 and informally since 1975. We constantly update or verify our information so that at minimum we have reasonable assurances that when someone calls an agency we list there will be someone who answers the phone.

The challenge with this system is that it requires a trained person to create the map formats and the technology is not cheap. Yet, we've been able to patch together the various components and are able to put the map images you see on the Internet, and have dozens of others at our office which are not yet on-line.

Subj: Tracking Systems
 Date: Thu, 27 Apr 2000 12:12:18 PM Eastern Daylight Time
 From: "Tamera De Gennaro" <TameraD@Novaland.org>
 To: mott-after-school@lists.client-mail.com

Our organization is seriously considering developing a tracking system designed specifically for after-school organizations. It would be a tracking system where data would be entered at a website, and you would receive an instant analysis, charts, graphs etc, plus quarterly graphs.

In order to develop the best possible, program, I would like to know, in an ideal world, all the factors you would like to track in order to better evaluate and improve your after school programs.

Also, as an on going service, how much money could you afford to spend on a monthly basis for this service.

Thanks for your help, we are hoping that at some point, we can get everyone on the same page and facilitate the process of tracking, operations etc.

Thanks for your help!

Tamera De Gennaro
 Director, Business Development
 Nova Community Foundation

Hi Dan,

I very much enjoyed your comments---almost as much as I enjoyed browsing your web site. Thanks!!

I am currently in the process of developing a strategic plan for our technology education program, and I fully intend to integrate tutoring and mentoring in the training mix. Many of the resources you have made available on your site will be of considerable help. But, I am wondering if your program uses curriculum, internet-based training, or computer-based training, as tools and resources for your tutors and mentors? If so, do you make them available to others, such as myself?

One of the more important projects I am working on is to mine the internet for teaching tools, tailored to specific audiences (youth, adult, disabled, seniors, non-English-speaking, etc.), for such subjects as email, HTML, basic internet, basic computer, word processing, etc. Do you, or anyone else, have any resources to suggest to me.

Gratefully,

Wade Englund--VISTA Volunteer
Technology Education Coordinator

Subject: Hello, some information and an opportunity

Date: Mon, 11 Jun 2001 08:03:40 -0700

From: steve@akouo.org

Organization: akouo

To: "Cynthia White" <cynthiawhite@thinkdetroit.org>

CC: "Daniel Bassill" <tutormentor2@earthlink.net>

Hello Cynthia,

I hope all is well and that you remember me from the Tutor/Mentor Conference evaluation workshops. It was a pleasure to meet you. I am sure things are moving along well with your programs this summer. I hope some of the materials from the conference are making your work a little easier.

I want to share some information with you about a project that Dan Bassill (from the Tutor/Mentor Connection; T/MC) and I have been working on and may also be of interest to you and Think Detroit. It is a web-based system that program staff and stakeholders of an organization can use to track and share their history and accomplishments. We are developing it as part of a broader evaluation system that will help tutor/mentor organizations better capture and share their interconnected, often-complex results and outcomes. We call this system "OHATS" and it can be used both at the individual program level and the broader organizational level. I attached a report to this email that describes the first six months of work and results of using OHATS, but you may want to look at other documents related to it at http://www.tutormentorexchange.net/TMC_OHATS_page.htm. One of those documents is a request for support to continue the development of OHATS.

We are sending this grant request to several philanthropies and technology companies that are "nonprofit-friendly." OHATS is still in its early development stage and we are actively looking for technology partners that can help us to fully prepare it for use by other nonprofit organizations. Our plan is to design OHATS so that every tutor/mentor organization can document and share its accomplishments and lessons, with internal stakeholders as well as with peer organizations in a Internet community network. I would greatly appreciate your help in taking a look at OHATS and seeing how the technology partners of Think Detroit may find it worthy of support. Maybe this is a venture that the T/MC in Chicago and Think Detroit could partner on.

I look forward to your comments and answering any questions you may have. Please feel free to refer others that may be interested to me.

Enjoy,
Steve Roussos

P.S. -- Please note that to see this report, you must have Adobe Acrobat Reader 4.0 on your computer. You can get free copies of this tool at this website: <http://www.adobe.com/products/acrobat/alternate.html>. If you would like me to send this report to you in a specific format, please feel free to email with a request. -- Thanks, Steve
