

Dan, I had come across a site that seemed to being something similar to what we're talking about. It is through a project called Turning Points that some in our group are working with. The site is <http://www.health.state.ok.us/partners/index.html> and on this page is an area called "electronic messaging system" that if clicked will take you to their system. Below are some questions I sent to the site's webmaster and his responses. Thought you might find them useful as we develop our discussion system. - Steve

Subject: Question regarding your Turning Points electronic messaging system

Hello,

I am interested in developing a similar system for a project that brings together directors and staff of youth volunteer organizations across the country to discuss issues of infrastructure development. Would you be able to provide me some information for the following items:

1) How is this type of system set up? Who might I contact to help us set this up?

The Turning Point BBS program was a free program that has now gone commercial. There are many like it available out there on the Internet. It uses CGI scripts through a perl interpreter that must be installed on the web server. If you are not familiar with web servers or CGI scripts you are going to have to find someone that can help you set it up. Any good search engine will take you to free BBS programs as well as the perl interpreter.

2) How well does it work to energize conversations? What are its strengths and weaknesses?

Its strengths are you can visit a BBS at your leisure and you have some choice as to the discussion you decide to become involved in. Its weaknesses are that it requires the person to return to your web site. If there is little of interest there or if the messaging process is too burdensome to the user, they will eventually not return.

3) What other system would you recommend to for groups to communicate by internet?

We will be switching from the BBS to a 'listserv' in the near future. You can also research 'listserv' through a good search engine. It is also required to be installed on the web server. Basically what it does is generate and manage an e-mail list and so when one person sends a message, everyone on the list gets the message. When that person replies, again everyone gets the message. Its strengths are that a person 'subscribes' to the list and receives these messages along with their usual e-mail, the burden is not on the user to return to the website. Listserv's also have a 'digest' function so that a person can receive only one mail a day from the list that include all of the messages for that day.

1998-2004 Tutor/Mentor Connection collaboration with Steve Roussos, U Kansas PhD student in 1998

Steve introduced himself prior to the Nov. 1998 conference and I invited him to be a speaker. That started a relationship with strong collaboration on grants, web site development and the OHAITS documentation system, which was strongest from 1998-2004. The relationship continues in 2019.

This is collection of email in 1999. Many focus on development of two government grants.

Ideally, we're looking for a system that allows real-time type chat rooms and a way to leave a trace of the conversation for others who could not attend the real-time session.

I've not come across programs that function as both Chat and BBS. Chats can really tie up the band width of a web server making it 'bog' down. You would need to check with your web provider or data people to see about the feasibility of this. The other thing with chats is that you must type fast and error free to convey much information quickly. There are many sites where chats are 'remotely-hosted' in other words you sign up with an account at the site and they host the chat on their server. ChatCity is one of these, again easy to look up in a search engine.

Hope this helps,

Rick Felty

Stergios Russos <russo@KUHUB.CC.UKANS.EDU>

To:

"Daniel Bassill" <tutormentor2@earthlink.net>

Hi Dan, How was your trip?

I'll be sending you another draft with some budget info tomorrow. I spoke with the folks that are giving out the Dept. of Education grants and they said our idea for the Learning Network sounds good and is worth sending a grant proposal to them (due April 2). Joan Costello had Amelia Kohm call me back. Amelia asked that I email her a copy of the proposal and their group will discuss how and if they can help us. She said they have more work than staff but they'll see how they can help.

There are 3 folks from YouthFriends who are going to the April conference and more might be joining them. This is great considering these folks are finding their own money to make it out there. Thanks for sending me more CD-ROMs and conference programs!

Talk to you soon, Steve

"tutormentor2@earthlink.net" <tutormentor2@earthlink.net>

Hi Dan,

I thought the additions you made were excellent!! I have changed very little (I just rearranged some paragraphs and grammar to make the reading flow a bit better).

I did not get a copy of the GIS abstract you added, but it sounds like a good supplement (just email it to me if you'd like feedback for it).

I say this grant is ready to send out. Just make sure that the line spacing is not too big for the cover letter because it can only be 3 to 5 pages. I used a line spacing just a bit under 1.5 spacing.

Oh, I did already have the Cabrini budget, I just wanted to remind you to include it with this proposal.

For the PTP proposal they want a copy of the Learning Network Budget and a copy of the Cabrini Connections budget.

The revised (no new numbers, I just cleaned up the format) Learning Network Budget

I've been loving the emails your forwarding to me.
Talk to you soon, Steve

ps Any news on the UPS proposal?

Subject: Tutor/Mentor

Steve,

Hope all is well. Here's a resource I think you should browse. It is the Philanthropy Journal on line and it has a Nonprofits & Technology monthly newspaper. It's a free subscription, so go ahead and order it and we can be reading the same thing.

In the April 1999 issue there were three or four stories related to what we are trying to do and people who want to see it happen, including a feature about the Kellogg Foundation. There also is quite a bit about on-line philanthropy.

I'd like you to be able to follow up the foundation/funding leads on the Mentoring network, while I look into some of the contributions stuff. We can both decide who and when to respond with our own letters to the editor.

the web site is www.pj.org

It's a good one.

Dan

Dan, Excellent site!! I've signed on for the paper. This site is a jackpot full of contacts and collaborators. The list of "speakers" in the past Nonprofit & Technology conferences is a great resource (for example <http://conference.pj.org/ny/speakers.htm>). Did you see their on-line courses (\$95 for a four-week session)? Would you or should I contact the them (the Philanthropy Journal and the National Strategy for Nonprofit Technology team, one of the planning partners is in Chicago: Deborah Strauss, Information Technology Resource Center) to see if they:

1. Want to contribute part of the 'cost-share' if we get to the second round of the FIPSE grant
 2. Want to partner with us now, regardless of the grant, and contribute some funds for the Networks development
 3. Give us other "personal" contacts that may want to be part of the Network as providers of venture capital and/or collaborators in its development.
- (Would you suggest any other questions?)

These are the three questions I will pose to Kellogg, MacArthur, Mott and Ford. The fact that we even applied for the Dept of Education grant and are looking for cost-share may be a good door into building a partnership with these folks. It shows that we have something going and aren't coming to them only for the money.

Chapin Hall did not have any direct contacts to Ford. Did Armen have any leads for who to contact at Mott Foundation? He mentioned that he is familiar with other national foundations who could be friendly to the Network too.

Enjoy, Steve

ps Two questions for developing our email mailing list: Do you have an email address for contacts in the directory? Can we get email addresses for all who register during the conference?

pps It looks like the Nonprofits & Technology Conference will be in Chicago May 20-22. Do you think you might go?

ppps How can I see the April 1999 issue you mention below? Thanks, sr

From:

Stergios Russos <russo@KUHUB.CC.UKANS.EDU>

To:

"tutormentor2@earthlink.net" <tutormentor2@earthlink.net>

Good to hear the great news. Yes, get that proposal out to as many as possible (but, don't forget the spell check). As you see fit, invite those you give it to to shape it and improve it. For example, I thought Armen Boyajian's comments that we need to strengthen the "needs" section are right on. Do you already have more specifics on what tutor/mentor organizations and their clients need and want? (I know I saw some comments on the survey data you sent me.)

I sent the PTP (adapted version) out to WebBoard yesterday. I got a personal phone call back from one of their product managers and he gave me another name higher up to talk to. The product manager said they can give us the software for \$489 and maybe free after I talk with this next person. But more importantly, I want WebBoard (one of the most widely used on-line group exchange systems) to help us clarify and develop how to best do Internet exchange and provide ongoing technical and financial support. They could be a good supplement to Ventana and GroupSystems. The software itself is pretty easy to use, so you, I and others can run it on our own. But I want their help with new, cutting edge technology as they develop it (and to use us as an environment to pilot new innovations).

Talk to you soon, Steve

Hi,

Last week I spoke with Tom Moore, WebBoard's tech support person. While we wait to hear back from them about what in-kind support they can give us he recommended that we download WebBoard 3.5 for the free 30-day trial (http://webboard.oreilly.com/wb3/try_buy_frame.html). WebBoard 4.0 is coming out near the summer and we can upgrade if needed. I should be hearing back from them this week.

He said we do not need ICQ if we use WebBoard (it does what ICQ does and more). Besides supporting phone telephone and video conferences, I think it does everything we need (actually, version 4.0 may be able to incorporate video and sound). Julie, could you please download it on the server and the three of us can start learning how to use it. Tom said it was fairly easy and we can email the support team as we need help. Will people be able to connect to the WebBoard from the T/MC web page or is that on a separate server?

Thanks, Steve

i Dan, Hope you had a good Monday. My Monday's are long and full of meetings and usually much new learning.

"tutormentor2@earthlink.net" <tutormentor2@earthlink.net>

Hi Dan,

For some reason I missed this email so my response is a bit delayed. This sounds like a good opportunity. The site to go to is <http://ctb.lsi.ukans.edu/>. This is the Community Tool Box. Its structure and layout are fairly self explanatory (and much time went into making it easy to understand and use). What I wanted to show you were the client pages and grant writing sections. I recommend you go through those. Each client has something slightly different, but you'll get an idea of the kind of support that is available. Almost every client used the documentation system as part of their on-line evaluation. The number of hits this year should go over 1 million. It is not yet as interactive as we'd all like. The chat rooms and forums use WebBoard. We predict that most people use it to learn new information specific to their problem. It would be nice to tie in technical assistance to the page so, if needed, people could purchase or use free on-line support. Feel free to contact me if you have any questions. The Tool Box team is also quite helpful and their contact information is on the site.

Steve

Hi Dan,

I miss speaking with you so I'll try to reach you at home sometime this week. Much to share and catch up on.

I have the utmost confidence that whatever hurdles come our way, and more specifically at this moment your way, that they will be overcome. I remember thinking from the first moment we met by phone "This guy's got IT, we can do something meaningful here." I can only fantasize about the challenges facing you and the team right now -- I send you my best and will have Paul and Derek give you a call to see if they can be of service more locally.

I'm still in boxes, but all is well and I'm having fun (I'll tell you more by phone). We have much to talk about and the FIPSE proposal is due in February - they did recommend we resubmit with minor revisions.

With all my positive energy coming your way, Steve

Subject: Tutor/Mentor Connection

Hi Steve,

I'm sorry I missed your call today, but I've been looking for an email from you for about a week, thinking that 1) the honeymoon's over, 2) school's started, 3) the new job's started, and 4) you're ready to reconnect.

I hope all of those are true statements and that you've a suitcase full of great memories and experiences from the past six to eight weeks.

We've had a busy summer too. In fact, it's been too busy and with too much change. We moved from Wards on the weekend of July 15 and ended up going into two different buildings. We've been trying to get our stuff together since. Last Friday I spent from 3PM until 9PM unloading a semi with furniture, boxes and file cabinets for the Kids' Connection site. The group spent Saturday unloading.

This move will cost us tremendously in terms of rent (\$50k a year); split staff (unknown); and fix up/start up costs of up to \$20k by year end). All this in an environment of huge challenges of keeping revenue growing and without enough people to do it all.

Amid this we organized a 5th annual tutor/mentor recruitment campaign (last weekend); developed a 7th edition directory with a "LIVE" on-line version on our web site; published a newsletter edition and have set up to start a 7th year of one-on-one tutoring. I'm tired, and so is my staff.

And to add stress to change, we've had turnover at most of our key partners. Betsy is leaving the Bar Foundation and has pretty much dropped the ball on the November fund raiser. Matt is leaving Pilotstone, but has a replacement. You've left Kansas. Jim's not doing the conference. And so forth.

On the plus side, we're still here, and still making new friends, which are too many to list. We have not gone much further on the TMLN and have not received funding from any of those to whom we had sent proposals (although have not yet received the "no" from UPS). This is just another hurdle.

It took the Christians about 350 years to get the blessings of Caesar. We're only 5 years into the T/MC. We've got the internet. They did not. Look at the positives.

So, tell me what's with you. How is the job, married life, PA, etc? Have your army of friends come to Chicago? Are they interested in linking with us? What more can I tell you. The conference has great speakers and I'll have the info on the web site in a week or so.

I ramble. I also look forward to hearing from you. In our last

conversation we were focused on the evaluation tools you'd piloted at UKans. They're needed here and they represent an on-line expertise which could anchor your "hub" of the TMLN.

Thanks again for calling. I'll look forward to hearing from you.

Dan

Subject: Steve's description**Date:** Sun, 10 Sep 2000 23:27:09 -0700**From:** "STERGIOS TSAI ROUSSOS" <TSAI_ROUSSOS@mindspring.com>**To:** "Dan home" <tutormentor1@earthlink.net>, <tutormentor2@earthlink.net>**References:** 1

Hi Dan,

Please tell me if this description works for you (I could shorten or lengthen it, or include any special language you may suggest):

Stergios T. Roussos is a public health scientist and educator specializing in the design and evaluation of initiatives to improve population-level health and development outcomes. He completed his Masters in Public Health with an emphasis on Health Promotion at the Graduate School of Public Health at San Diego State University. Currently, he is completing his doctoral work in Child Psychology at the Department of Human Development at University of Kansas. As a research associate of the university's Work Group on Health Promotion and Community Development, he helped expand the conceptual and empirical research on community-based collaborative partnerships to improve community conditions and public health. His dissertation is a study of how a school-community initiative created the conditions in a metropolitan area to take adult volunteerism for youth to a community-wide level. Mr. Roussos is an author and co-author of several research and conceptual papers in community health and preventive medicine. Areas of current work include community-based efforts related to youth development, cardiovascular disease, HIV/AIDS, tobacco and other substance use, and food security.

In addition to his scholarly work, Mr. Roussos is a skilled trainer and coach for health, social service, and philanthropic organizations. He develops and implements workshops on research and evaluation, information systems for program management and implementation, and Internet-based training and evaluation systems. As a founder of Community Research Centers, his passion is to create a process that enhances and channels the skills and resources of social scientists to better serve community-based work and objectives. Mr. Roussos represents a unique blend of applied scientist and practitioner for the improvement of individual, organizational, and community outcomes.

Dan, I've worked on the Tutor/Mentor Exchange web data entry most of the weekend. It needs a bit more work before it is up - I'm looking at later Monday or Tuesday. This has been a good learning period for me as I experience the challenges of creating interactive databases on the web.

On Friday I was approached by a group that would like to hire me (away from the hospital). One of the key areas they are working on and would like me to work on is (believe it or not) their interactive web database project that collects and connects health and medical data from communities all over the U.S. They are now looking at GIS type work too. Also, one of their key services are "listening sessions" they conduct with community leaders throughout the country and would greatly benefit from the Group Systems tools. They have some real web professionals working on their projects. I'll see what they're offer looks like later this week. I did mention our work and my requirement to use this as an opportunity to enhance our projects. Cross your fingers, this may be a great opportunity for me to make some good connections that directly relate to and could enhance our Tutor/Mentor Exchange developments.

Talk to you soon, Steve
