

TEAM H - Mapping & Analyzing Participation in Tutor/Mentor Leadership and Networking Conferences

Quality of data selection, cleaning, preparation, and documentation

- Love the depth of the report, but may need to condense to reach assignment requirements (max 3 pages) unless an exception was made.
- The data cleaning and preparation were transparent, descriptive, and even included information from previous iterations. I think this is a good way to ensure progress across years for the client.
- I like the contents of the visualization framework image, but I think it could be improved by adding images and/or editing the cell contents to more strongly align with the curriculum. Using consistent terminology and matching the familiar flow more closely (showing snapshots of visualization or graphic symbols/variables) may make it translate better for next year.

Appropriate selection of tools, algorithms, workflows, and parameter values

- The tools, algorithms, and workflows are described in detail. Things like naming off the CSV exports or filenames that are already intuitively-named in your project files could be removed.

Quality of data analysis, visualization results, and discussion of insights gained

- I liked the breakdown of data analysis and data analysis types. This made the workflow very clear and reproducible.
- I think the Kumu visualization is very cool, both in visuals and insights.
- The deployment environment section is a nice addition, although mentioning pushing to GitHub could be assumed. Instead, it could be included that a basic understanding of Git is needed for your workflow (add/commit/push) to warn future students. Any further deployment information could just be in a README.

Completeness and quality of validation and redesign

- This is sort of connected to the length suggestion, but maybe the topics could be condensed into a couple of paragraphs about key influences for the redesign. This could maintain depth, but optimize the reading experience.

Overall quality of content, including the accuracy and completeness of information, the expressiveness and clarity in communication of ideas using text and visualizations, and the appropriateness of references to/attribution(s) for the work of others

- This was a comprehensive report, giving a lot of complete information on design choices, client interaction, purpose, and team members. The length allows for strong clarity and communication, but risks drawing attention from the most important insights and experiences on a really neat project. Maybe separating the report into sections based on audience would be helpful so that no information is lost (some info being only in a README, separating client-relevant and student-relevant information)
- I liked the references to previous groups and projects; it sort of creates a trace of who the client has interacted with and what has come of it.
