Finalize Visualization & Write-Up

Put all the elements together: Use text from your client project write-up and the most insightful visualizations you created to compile a visualization that “tells it all.” Browse the maps from <https://scimaps.org/maps> , <https://scimaps.org/maps>, <https://informationisbeautiful.net> , <https://informationisbeautiful.net>, and other visualization sites for inspiration on how to layout text and images in a synergistic manner.

Review the draft paper your team has developed over the 8 weeks. The paper should explain the problem and insight needs, the data and data analyses and visualizations you constructed. Make sure that anyone who reads this explanation will be able to reproduce all steps and obtain the very same results you achieved. Use the feedback you have received from instructors and your peers to help improve the reporting of your results. Make sure the write-up is internally consistent.

Add an ‘Acknowledgment’ section in which you thank people who provided resources or helped you with this project. Provide a ‘References’ section with complete data, software, literature references to all work you use or cite. Share links to your code (e.g., Python notebooks, Power BI workbooks on GitHub).

Discuss your project with your client. Ask for peer reviews from your fellow students if you think someone or some group may have particular insight into your project. Make sure everything is professionally presented, error-free, and easy to understand.

Please aim for quality and not quantity. The final documentation should print on no more than four pages on a letter size printout. Make sure all text is legible, provide links to high-resolution visualizations and/or interactive visualizations.

General Grading Rubric

Your overall project will be graded out of 20 points and 4 points each will be awarded for:

- Quality of user and needs analysis.
- Quality of data selection, cleaning, preparation, and documentation.
- Appropriate selection of data analysis/visualization/interaction algorithms that match your users and their tasks.
- Completeness and quality of evaluation and data analysis and visualization revisions and results discussion.
- Overall quality of final write-up, including the accuracy and completeness of information, the expressiveness and clarity in communication of ideas using text and screenshots, and the appropriateness of references to/attribution(s) for the work of others.

This is a group assignment, so please work as a group. Try to find the strength of each team member and distribute and organize team work so that you maximize the result. Form, storm, norm, and perform!

Formatting

The paper should be formatted like a research paper. Make sure that your final paper is properly formatted and properly cites relevant sources used by students in designing their final projects. Some supplementary resources below will help with this process:

- **Anatomy of a Research Paper** (<https://iu.instructure.com/courses/2389650/files/198166199/download?wrap=1>)
- **Client Project Paper Template**  (https://docs.google.com/document/d/1fXjcv6MynA6GqLPnZ-ST73s_WGWNmWiO3Gfi4GznlaU/edit?usp=sharing) (<https://iu.instructure.com/courses/2389650/files/198166161?wrap=1>)

Submission Requirements

1. Submit the Final Client Project Report

Please submit the final project as a PDF Format file in your group's Google Drive folder and submit a link to your final project materials via Canvas.

2. Presentation

Teams will present their final Project Results via a 5-minute presentation. Presentations will take place on **April 28th, 3:00pm -5:00pm at Fine Arts Building, room 102**. Please aim to attend all presentations to provide feedback to your classmates and to learn from the challenges and opportunities encountered by other teams.

Make sure your slides cover

1. Official project title, client name, team member names, affiliations, and photos

2. Stakeholder(s) and their needs
3. Statistics of the datasets used
4. Data analysis visualization methods
5. Discussion of actionable insights
6. Links to all data, code, visualizations
