Intermediate Project Results - Submission

Submit by Sunday, April 5, 2026 at 8pm EDT:

Intermediate Project Results - Evaluation & Redesign

Validate the data analysis/visualization results by having your friends, colleagues, and if possible your client(s) comment on them. Do they understand the visualization (elements)? What do they miss? In addition, evaluate your results by comparing them with related work.

Refine or re-design the visualizations you have created for the project. Optimize analysis workflows and visualizations to address problems identified during evaluation.

Submission Requirements

1. Update the Draft Client Project Report

Revise last week's write-up taking into account discussion and feedback. Keep in mind this draft will be reviewed by your peers in other groups, so make it legible and professional!

Update the draft client project report to provide:

1. What problems surfaced during the evaluation and how does your redesign resolve them?
2. Discussion of challenges and opportunities. Describe any limitations or issues you faced, such as time constraints or data quality issues. Address complexity and scaling issues, desirable modifications and extensions of your work, and any promising avenues you see for future work.

Share supporting materials you have developed, including visualizations that represent your data and the story you are trying to tell.

2. Submit the link to your team's Google Drive Folder on Canvas.

3. Update the class in your team's work in your group's discussion thread.

Share your initial work and link to all your results from that week so that others can comment. You will update this discussion thread each week with updates on your team's progress.

4. Presentation

Teams will present their Project Plans via a 5-minute presentation. Ideally, the presentation is in-person; but teams of online students can present via zoom. Presentations will take place in **Luddy Hall, Room 1106 on April 6, 5:30-6:45 PM ET**. Please aim to attend all presentations to provide feedback to your classmates and to learn from the challenges and opportunities encountered by other teams.

Make sure your slides cover

1. Official project title, client name, team member names, affiliations, and photos
2. Stakeholder(s) and their needs
3. Statistics of the datasets used
4. Data analysis visualization methods
5. Discussion of key insights gained so far
