

Subj: A possible net communication source
Date: 99-01-18 21:09:48 EST
From: russo@KUHUB.CC.UKANS.EDU (Stergios Russos)
To: CabriniC@aol.com ('CabriniC@aol.com')

Hi Dan,

A friend recommended ICQ (I Seek You) as a source for real time net communication. Below is there sight. As time permits, I'd love to know if you think of it. I've just began to look at it now.

Steve

1998-2004 Tutor/Mentor Connection collaboration with
Steve Roussos, U Kansas PhD student in 1998
This is discussion of a new technology.

Hi Dan,

I put out a few calls and email invitations to YouthFriends coordinators regarding the conference. Folks might call me or contact your office directly. February is YouthFriends month and the staff is out and about. There are two people I'll try to confirm a yes or no from by tomorrow since I think they would be fantastic presenters.

I got your package (thanks a billion!). I'll send over some specific project ideas in a few days and then I'd like to talk by phone to discuss how to best bring the ideas into reality. The central focus of my ideas is on enhancing T/MC's infrastructure as we combine our ideas and methods for evaluation and tech assistance.

I checked out the Benton Foundation web site (<http://www.benton.org/>) that was praised along with the T/MC as one of the more useful websites (nice to get those kinds of compliments from folks). Benton seems to have a focus on application of communication technology for social good: "Our mission is to promote communications tools, applications, and policies in the public interest. We accomplish this in three ways. Through our leadership in the nonprofit community in the field of communications. By acting as a broker between nonprofits, private industry, and government. And by serving as a laboratory for communications technologies and strategies." They could be a good partner to help us establish a national communication network for discussions among volunteer organizations with T/MC as one of the hubs. So once we layout some ideas for this discussion system we can send them a proposal for some assistance.

As your time permits, please check out the ICQ groupware (FREE at <http://www.icq.com/groupware/specifications.html>) that I mentioned and let's set up a time to experiment together with a real-time chat session. I believe it is safe to use, but would it be possible for the person who manages your web site to also give us some advice on its safety before we download it? The ICQ needs a home "website" (it actually allows you to create your own web page toward this end) and if we use T/MC as the homebase I want to make sure it won't cause any problems.
Talk to you soon, Steve

ps I could not find the recent Newsweek article on mentoring. Do you remember what week it was?

What Is ICQ?

ICQ - Product Description

ICQ is a revolutionary, user-friendly Internet tool that informs you who's on-line at any time and enables you to contact them at will. No longer will you search in vain for friends or associates on the Net. ICQ does the searching for you, alerting you in real time when they log on. The need to conduct a directory search each time you want to communicate with a specific person is eliminated.

With ICQ, you can chat, send messages, files and URL's, play games, or just hang out with your fellow 'Netters' while still surfing the Net.

It lets you choose the mode of communication you wish to employ. Regardless of the application, be it chat, voice, whiteboard, data conferencing, file transfer or Internet games, ICQ will get your entire message across in real time.

ICQ supports a variety of popular Internet applications and serves as a Universal Platform from which you can launch any peer-to-peer application (such as Microsoft NetMeeting or Netscape CoolTalk).

It can also be used in a multiple-user mode, so groups can conduct conferences or just 'hang out' on-line.

The program runs in the background, taking up minimal memory and Net resources. While you work with other applications, ICQ alerts you when friends and associates log in, allowing you to work efficiently while maintaining a wide range of Internet functions at your fingertips. Among the functions available are: chat, message, e-mail, and URL and file transfer.

All these functions are consolidated into one easy-to-use program that integrates smoothly into desktop systems.

How does it work?

It's simple. When you install ICQ, the program asks you to register at a server, which is connected to a broad network of servers spanning the Internet. At the time of registration, you receive a unique UIN (Universal Internet Number). In addition, ICQ gives you the option of entering personal information along with your UIN. This allows other ICQ users to recognize you when you log on.

Once you've registered, you can compile a selected list of friends and associates. ICQ uses this list to find your friends for you. Meanwhile, ICQ waits quietly in the background without interrupting any other applications in use. As soon as you log onto the Internet, ICQ automatically detects the Internet connection, announces your presence to the Internet community and alerts you when friends sign on or off.

Once you know who's on, all it takes is a click of an icon to initiate chat, implement URL transfers, send messages, exchange files, or launch any external peer-to-peer applications.

The ICQ Server Network

The ICQ technology is based on a proprietary server and database network. The ICQ network was designed as a global solution for a large number of users. 'By routing all inter-user communications as peer-to-peer, we take the load off the servers, enabling them to support a huge number of users' says Yair Goldfinger, one of the four founders of ICQ.

Hi Dan, I just checked out the "meeting-4m" page you mention below. Wow! It looks great. I could not find a price

I also realized that I may have made a mistake with something. Below, you mention "Group Systems"

Subject: Re: Suggestions for internet-based conversations for volunteerism infrastructure

STEVE,

I'm reviewing the ICQ memo, but wanted to tell you of a "facilitator's" conference I attended last week.

The speaker, Danny Middleman, at DePaul University, was one of the developers of Group Systems at the University of Arizona where it originated. He talked about a number of conversation tools, but one Meeting-4M sounded real interesting for same time/different time on-line meetings. Their web site is www.jdhtech.com. You might want to take a look.

I'll be sending you more information on Danny, and be inviting him to join our conversation as a partner. The two of you may connect in very strong ways.

Dan

Part 1.2

Encoding: base64

Dear Matt,

This is Steve Russos - you might remember me from an email Dan had sent you about using ICQ software for discussions and chats on the T/MC web site. I am working with Dan Bassill on a grant to create an Internet-based Learning Network for mentoring organizations throughout Chicago. This email comes with a surprise that we hope you will be support. Please forgive us for this last-minute urgency.

We are adding several of our existing T/MC supporters as partners in this grant. We are doing this because the federal grant requires multiple partners and a 50% match for all government funds. To meet this 50% match we are writing in the in-kind resources and support already provided by T/MC supporters as part of what this grant calls "cost-share." Below are my very rough approximations of Pilotstone's in-kind contributions are per year. I am new to this so my figures could be way off. The preliminary grant application is due April 2 and does not require a final detailed budget so these figures can be changed assuming we pass the first stage of the funding process and have the chance to write a full proposal.

My request of you is that you review my rough estimates below and if you feel these need to be changed please email me back by 3:30pm Tuesday March 30 (which is probably today since I am sending this Monday evening). If no changes are recommended than you do not need to email back. I will incorporate any changes I receive by 3:30 into the preliminary proposal due April 2. Please remember, this budget proposal does not require that Pilotstone contribute anything other than it is currently providing and will be used only to indicate to the federal grantmaker that T/MC does have in-kind support. The goal here is to fairly, without underestimating, display the total in-kind support provided by the Pilotstone that might in some way contribute to any T/MC-related role, function or event. As possible, I would love if my figures could be "corrected" upwards. [Dan, please also make corrections as needed.]

Thanks so much and again please forgive this surprise and poor planning. Steve

p.s. Please don't hesitate to email or call me with any questions (785-864-0739). I have also attached a draft of the preliminary grant proposal below for your review as convenient.

Partner: Matthew T. Mead, Senior Software Developer
Institution/Organization: Pilotstone Technologies
Type of Institution/Organization: Private Corporation

Cost Share Provided by Partner

1. Salary & Wages (I added 5% annually)

YR 1: \$20,000 YR 2: \$21,000 YR 3: \$22,050 YR 4: \$23,153 YR 5:
\$24,310 Total: \$110,513

2. Benefits

YR 1: YR 2: YR 3: YR 4: YR 5: Total:

3. Travel

YR 1: YR 2: YR 3: YR 4: YR 5: Total:

4. Equipment Purchase (hardware and software upgrades?)

\$15,000 Total: \$75,000

5. Materials & Supplies (disks, paper, ink, communications line, etc?)

YR 1: \$6,000 YR 2: \$6,000 YR 3: \$6,000 YR 4: \$6,000 YR 5:
\$6,000 Total: \$30,000

6. Consultants/Contracts (this is for time spent working on any
T/MC-related activities)

YR 1: YR 2: YR 3: YR 4: YR 5: Total:

Other (Equipment rental, printing, etc.) (T/MC use of the server,
other Pilotstone technology needed to maintain the website)

YR 1: \$1,000 YR 2: \$1,000 YR 3: \$1,000 YR 4: \$1,000 YR 5:
\$1,000 Total: \$5,000

Other Funding Sources (please attach list)

YR 1: YR 2: YR 3: YR 4: YR 5: Total:

Total Cost Share Provided by Partner

YR 1: \$42,000 YR 2: \$43,000 YR 3: \$44,050 YR 4: \$45,153 YR 5:
\$46,310 Total: \$220,513

Matt, I also would love to talk with you when you have a chance about what you think it would take to set up such a Learning Network. I attached a draft copy of the grant below which includes some ideas of what the Network would include and what Pilotstone's role might be. I would love some feedback on this when we talk. What would be a good number and time to reach you?
Thanks again, Steve

Here is a draft of the grant proposal in Rich Text Format

Hi Dan,

I spent some time looking at Novell's GroupWise and at ICQ, a system for internet conversations. Here are some thoughts as to what we might do to begin an ongoing internet conversation.

Actually, before I discuss my suggestions, here are the purposes and functions I believe we're looking for in a conversations system (please add and revise these as needed):

1. We want multiple people to interact simultaneously
2. We want know and be able to control who is part of the conversation(know who is listening and the degree security and confidentiality)
3. We want conversations to be documented over time so participants can see previous discussions
4. We want as much flexibility as possible: by email, by internet, by phone
5. We want to the ability to share documents, presentations, audio, video, or other information - if possible during the conversation.

Now, given that I am not a computer or software expert, here's what I understand the pros/cons of using ICQ (<http://www.icq.com>) GroupWise (<http://corp.novell.com.au/groupwise/>).

ICQ pros: It's free (for now, but has been free for a while), anyone can download it or related products.

It's being used all over the world, which suggests its utility and stability, and probably ease of use.

It allows the creation of specific discussion groups and chat rooms

It requires connection to a web page (your own or there are tips on how to create one)

It allows you to know who on the discussion list is available for discussion (that is if they are using the web) and prompt them to join you in a discussion.

(I believe, but am not sure) It allows the creation of multiple conversations as "chats" that I'm assuming would be saved or documented so others could go back and see the discussion from the start.

ICQ cons:

I'm not sure of its security. I believe others could join our discussion "at will." But they would first need to find our discussion, which is unlikely unless we invite them.

It requires participants to have some internet experience and
